Examining Evidence of Student Learning

Learning Rounds Guide: VESL & DOK

Gradually releasing students to successfully attain and consistently demonstrate each of these skills and behaviors requires careful attention to rigor and complexity and must include **higher order thinking skills** such as use of analysis, evaluation, logic, reasoning, problem-solving, justifying, and transfer of learning to new contexts via planning and creativity.

| | |
|---|--|
| Closo and Analytic Reading of Various Media Types | Students read/observe with a clear purpose and prompt that requires: • Annotation, source-dependent questions, multiple readings, note-taking, and use of analysis • Multiple sources to gain knowledge and transfer to evidenced-based conversations and writing tasks |
| Communicate Using Precise Academic Language | Students speak and write precisely using academic language that requires: • Effective use of general academic and domain-specific vocabulary • Productive discourse connected to prompts, starters, frames, and scaffolds appropriate to the domain of study • Meaning of academic terms and symbols solidified through conversation and applied in writing |
| Structured Collaborative Conversations | Students effectively work in pairs or groups on clearly defined tasks that require: • Accountability for roles, responsibilities, and completion of task/processes • Structured academic discourse to analyze, evaluate, and use evidence-based reasoning for problem-solving • Conveying understanding, sharing ideas, critiquing, and building upon the reasoning of others |
| Evidenced-based Arguments | Students develop claims, conjectures, and hypotheses that require: • Analyzing information and applying reasoning to justify with evidence • Constructing, applying, and justifying mathematical/scientific models |
| Evidenced-based Writing | Students clearly communicate through a range of writing tasks that require: • Short constructed responses and process writing (pre-write, draft, revise, edit, and publish) • Responding in a variety of purposes and audiences, and justifying opinions and arguments with reasoning and evidence • Use of writing across content areas to show understanding of concepts and transfer of learning |

| DOK 4: Extended Thinking | DOK 3: Strategic Thinking |
|---|---|
| An investigation or application to real world; requires time to research, problem solve, and process multiple conditions; could require synthesis of information across multiple sources and/or disciplines <i>Example: Develop a thesis, hypothesis, and/or solution to a real-world problem and support it with evidence from multiple sources or content areas.</i> | Requires reasoning or developing a plan or sequence of steps, requires decision-making or justification <i>Example: Develop a thesis/prediction/hypothesis and support it with evidence and reasoning.</i> |
| DOK 2: Basic Application of Skills/Concepts | DOK 1: Recall & Reproduction |
| Use of information, two or more steps with decision points along the way, explain relationships <i>Example: Support a given main idea, thesis, prediction, or hypothesis with evidence.</i> | Recall of a fact, term, principle, concept; perform a routine procedure, locate details <i>Example: Retell details of a story/text: who, what, when, where, how...</i> |

Evidence Based Arguments

Students develop claims, conjectures, and hypotheses that require:

- Analyzing information and applying reasoning to justify with evidence
- Constructing, applying and justifying mathematical/scientific models

check math prob. using inverse relationship
making predictions in math DOK 2

"Why isn't working as expected" ^{DOK 3.4}
(Making Slime)

Students analyzed ethical problems in chapter based on text evidence and gave opinion. ^{DOK 4}
topics: sexism, lack of parenting, robbery

- Text Evidence - small group
Topic: Man vs. Man or Man vs. Nature.

- analyze word problem : Come up w/ strategy to solve. Constructing
models to justify : solve DOK 3.4

- teacher shared that there are many names for same thing:
count up/down, subtract, take away, etc. (DOK 3)

- Students drew pic to prove math problem
Non example given (DOK 3)

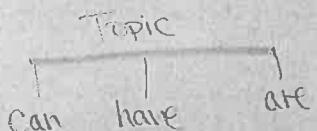

- sorting words

Structured Collaborative Conversations

Students effectively work in pairs or groups on clearly defined tasks that require:

- Accountability for roles, responsibilities and completion of task/processes
- Structured academic discourse to analyze, evaluate, and used evidence-based reasoning for problem-solving.
- Conveying understanding, sharing ideas, critiquing, and building upon the reasoning of others.

- Working in small groups
- whisper aloud and with partner ^{DOK 2}
- small group discussions
- Kagan Strategies (Stand up, hand up, pair up)
- students collaborating using Icon Frames ^{DOK 3}
- Students analyzed a word problem (multi-step). Had meaningful collaborative conversations that used academic vocabulary and strategies to organize information and solve the problem. (DOK 3)
- pairshare ~ justify answer (2)
 - face your partner (on carpet) in order to communicate.
- Whisper Pair Share

Evidence Based Writing

- Students clearly communicate through a range of writing tasks that require:
- Short constructed responses and process writing (pre-write, draft, revise, edit, and publish)
 - Responding to a variety of purposes and audiences, and justifying opinions and arguments with reasoning and evidence
 - Use of writing across content areas to show understanding of concepts and transfer of learning.

• Book marks

- analyze the text DOK 2

• Citing textual evidence DOK 3

- Citing evidence from novel ex: Rising Action, Climax, Falling Action

• Students used 1/2 Sheets to record problems | take notes DOK 1-2

• editing & revising narrative

Communicate Using Precise Academic Language

Students speak and write precisely using academic language that requires:

- Effective use of general academic and domain-specific vocabulary
- Productive discourse connected to prompts, starters, frames, and scaffolds appropriate to the domain of study
- Meaning of academic terms and syntax solidified through conversation and applied in writing.

check your answer w/ your neighbor DOK 1

Students teaching each other
(ex: ethics) DOK 3

- Labeled Math problem Answers (DOK 1)
 - used lang. to explain strategies for subtraction (DOK 1)
eg: crossout count up,
draw a picture,
visualize
- Math academic language
(subtract, grouped etc.)
- initial & final sound academic language
- using topic vocabulary (Snood, tom, fiction
Dictionary code, etc.)
 - scientific vocab
"pit tag" "endangered"

Close and Analytic Reading of Various Media Types

- Students read/observe with a clear purpose and prompt that requires:
- Annotation, source-dependent questions, multiple readings, note-taking, use of analysis
 - Multiple sources to gain knowledge and transfer to evidenced-based conversations and writing tasks

- transferred prior knowledge from multiple sources to a study guide. DOK 2
- . citing text evidence when analyzing DOK 2 the story
- word problem - st. had to do multiple steps to solve DOK 2
- . Teacher lead collaborative conversation
Multiple perspectives, character developments
- . Use of Gate Icons.
- . Note taking: identify can, are, have of a Turkey from Story and video
- circled/underlined key #'s & Academic vocab.
- circled/underlined key #'s & Academic vocab.
in Math problems (DOK2)
- class w/broken Smartboard learned to "improvise" using large whiteboards, students seated on carpet

Teachers meet school wide to go over the learns from the Learning Rounds.
